Subject: IWG: Exposure Quality Table
Attachments: Ranking of Controlled Inhalation Chamber Studies for Exposure Quality.docx; Exposure Quality-FA.docx

At our last IWG meeting, we had a lively discussion about the exposure quality table. One of the suggestions offered was to draft a description of the criteria used to evaluate exposure quality. I offered to write something and share it with the group. So if you are tired of looking at the formaldehyde assessment and need a change of pace, consider reading the attached document. It is only 1.5 pages long. I would appreciate your thoughts on it. I have also attached the exposure quality table.

Andrew Kraft has asked for an opportunity to share his thoughts on the exposure quality table with the IWG. We may do this on July 15 or at a later date; it all depends on where we stand with the assessment review.
